4 (B) a fuel cell housing enclosing said fuel cell with an anode chamber being de-
5 fined between said anode aspect of the catalyzed membrane electrolyte and an exterior por-
6 tion of said cell housing;

7 (C) a direct fuel feed into an anode chamber that has no liquid exit port such that
8 liquid that is present in said anode chamber cannot exit said anode chamber except across
9 said catalyzed membrane electrolyte;

10 (D) at least one gaseous effluent release port located in said anode chamber in
11 close proximity to said anode aspect of the catalyzed membrane electrolyte; and

12 (E) a load coupled across said fuel cell, providing a path for electrons produced in
13 electricity generating reactions of said fuel cell.

A) Please add the following new claim 38:

1 38. (New) The direct oxidation fuel cell as defined in claim 37 wherein a substance de-
2 livered by said direct fuel feed into said liquid-closed volume in the anode chamber is up to
3 100% fuel.

Please add the following new claim 39:

1 39. (New) The direct oxidation fuel cell as defined in claim 38 wherein said fuel is
2 methanol.

Please add the following new claim 40:

1 40. (New) The direct oxidation fuel cell as defined in claim 37 wherein fuel is delivered
2 by said direct fuel feed into said anode chamber without anode liquid recirculation.

Please add the following new claim 41:

1 41. (New) The direct oxidation fuel cell as defined in claim 37 wherein water produced
2 at said cathode is not actively collected or pumped to said anode chamber.

Please add the following new claim 42:

- 1 42. (New) The direct oxidation fuel cell wherein gaseous effluent traveling out of said
2 fuel cell through said gaseous effluent release port is at least partially comprised of carbon
3 dioxide.

Please add the following new claim 43:

- 1 43. (New) The direct oxidation fuel cell as defined in claim 37 wherein at least a portion
2 of one wall of said anode chamber is gas permeable and liquid impermeable.

Please add the following new claim 44:

- 1 44. (New) A direct oxidation fuel cell, comprising:
2 (A) a catalyzed membrane electrolyte having an anode aspect and a cathode as-
3 pect;
4 (B) a fuel cell housing with an anode chamber being defined between said anode
5 aspect of said catalyzed membrane electrolyte and an exterior portion of said cell housing,
6 and fuel being delivered to, but not actively recirculated from, said anode chamber; and
7 (C) gaseous anodic product removal component disposed between said catalyzed
8 membrane electrolyte and said housing.

Please add the following new claim 45:

- 1 45. (New) A direct oxidation fuel cell system, comprising:
2 (A) a direct oxidation fuel cell having:
3 (i) a catalyzed membrane electrolyte, having an anode aspect and a cath-
4 ode aspect;
5 (ii) a fuel cell housing enclosing said fuel cell with an anode chamber be-
6 ing defined between said anode aspect of the catalyzed membrane electrolyte and an exterior
7 portion of said cell housing;

8 (iii) a direct fuel feed into a liquid-closed volume in said anode chamber
9 such that liquid fuel that enters into the chamber by the direct fuel feed cannot exit the cham-
10 ber except across said catalyzed membrane electrolyte; and

11 (iv) at least one gaseous effluent release port located in said anode cham-
12 ber in close proximity to said anode aspect of the catalyzed membrane electrolyte;

13 (B) a fuel source coupled to said anode chamber; and

14 (C) means by which current can be collected from the fuel cell and conducted to a
15 load, whereby electricity is generated by said fuel cell as fuel is delivered to said anode
16 chamber without external pumping of cathodically-generated water and without active water
17 removal elements.

Please add the following new claim 46:

1 46. (New) A direct oxidation fuel cell, comprising:

2 (A) a catalyzed membrane electrolyte assembly having an anode aspect and a
3 cathode aspect and

4 (B) means for outporting gasses away from the anode aspect of the fuel cell which
5 means for outporting gasses is disposed in close proximity to said anode aspect of the cata-
6 lyzed membrane electrolyte assembly.

Please add the following new claim 47:

1 47. (New) A gas management component for use in a direct oxidation fuel cell having a
2 catalyzed membrane electrolyte with an anode aspect and a cathode aspect, comprising:

3 an element substantially comprised of a gas-permeable, liquid-impermeable
4 material, which element is disposed in close proximity to the anode aspect of the catalyzed
5 membrane electrolyte assembly.

Please add the following new claim 48:

1 48. (New) The gas management component as defined in claim 47 wherein said material
2 is gas-selective in such a manner that it is permeable to anodic effluent gas, but is substan-
3 tially less permeable to oxygen.

Please add the following new claim 49:

1 49. (New) The gas management component as defined in claim 47 wherein said gas
2 management component is made part of a flow field element, providing said flow field ele-
3 ment with gas releasing properties while effectively delivering fuel to active area of the
4 membrane electrolyte. .

Please add the following new claim 50:

1 50. (New) The gas management component as defined in claim 49 wherein fuel is deliv-
2 ered to said active area of the membrane electrolyte through an associated anodic diffusion
3 layer.

Please add the following new claim 51:

1 51. (New) The gas management component as defined in claim 49 wherein said flow
2 fields encourage removal of anodically-generated gasses such that they are released from the
3 direct oxidation fuel cell prior to excessive collection of gaseous anodic product within the
4 said anode chamber in said fuel cell.

Please add the following new claim 52:

1 52. (New) The gas management component as defined in claim 47 wherein said gas
2 management component is disposed within said fuel cell in such a manner that anodically-
3 generated gasses are released prior to coalescing and impeding the flow of fuel from an asso-
4 ciated fuel source into said anode chamber.

Please add the following new claim 53:

- 1 53. (New) A membrane electrode assembly of a direct oxidation fuel cell, comprising:
2 (A) a protonically-conductive, electronically non-conductive catalyzed membrane
3 electrolyte;
4 (B) a catalyst disposed on said membrane electrolyte;
5 (C) an anode diffusion layer disposed contiguous to an anode aspect of the mem-
6 brane electrolyte;
7 (D) a cathode diffusion layer disposed contiguous to a cathode aspect of the
8 membrane electrolyte; and
9 (E) a gas-permeable, liquid-impermeable layer coupled to, or in close proximity
10 with said anode diffusion layer.

Please add the following new claim 54:

- 1 54. (New) The membrane electrode assembly as defined in claim 53 wherein said gas-
2 permeable, liquid-impermeable layer is mechanically attached or bonded to said anode diffu-
3 sion layer.

Please add the following new claim 55:

- 1 55. (New) A direct oxidation fuel cell comprising:
2 (A) a membrane electrode assembly, including:
3 (i) a protonically-conductive, electronically non-conductive catalyzed
4 membrane electrolyte;
5 (ii) a catalyst disposed on said membrane electrolyte;
6 (iii) an anode diffusion layer disposed contiguous to an anode aspect of the
7 membrane electrolyte;
8 (iv) a cathode diffusion layer disposed contiguous to a cathode aspect of
9 the membrane electrolyte; and

- 10 (B) a gas-permeable, liquid-impermeable layer coupled to said anode diffusion
11 layer; and
12 (C) a coupling across said fuel cell to conduct electricity generated by said fuel
13 cell to an associated load; and
14 (D) a fuel cell housing substantially enclosing said fuel cell.

Please add the following new claim 56:

- A, 1 56. (New) A direct oxidation fuel cell system, comprising:
2 (A) a fuel source;
3 (B) a direct oxidation fuel cell including:
4
5 (i) a protonically-conductive, electronically non-conductive catalyzed
6 membrane electrolyte;
7 (ii) a catalyst disposed on said membrane electrolyte;
8 (iii) an anode diffusion layer disposed contiguous to the anode aspect of
9 the membrane electrolyte;
10 (iv) a cathode diffusion layer disposed contiguous to the cathode aspect of
11 the membrane electrolyte; and
12 (v) a gas-permeable, liquid-impermeable layer coupled to said anode dif-
13 fusion layer; and
14 (vi) a coupling across said fuel cell to conduct electricity generated by said
15 fuel cell to an associated load.

Please add the following new claim 57:

- 1 57. (New) The direct oxidation fuel cell system as defined in claim 56 wherein the fuel is
2 up to 101% fuel.

Please add the following new claim 58:

- 1 58. (New) The direct oxidation fuel cell system as defined in claim 57 wherein said fuel
2 is methanol.

Please add the following new claim 59:

- 1 59. (New) A method of managing anodic effluent in a direct oxidation fuel cell, said fuel
2 cell having a catalyzed membrane electrolyte with an anode aspect and a cathode aspect, the
3 method including the step of:
4 removing gaseous anodic effluent from a liquid by providing a gas management com-
5 ponent comprised substantially of a gas-permeable, liquid-impermeable layer disposed in
6 close proximity to the anode aspect of the direct oxidation fuel cell.

Please add the following new claim 60:

- 1 60. (New) The method, as defined in claim 59, including providing said gas-permeable,
2 liquid-impermeable layer in contact with the anode aspect of the membrane electrolyte as-
3 sembly.

Please add the following new claim 61:

- 1 61. (New) A method of separating anodically-generated gasses in a direct oxidation fuel
2 cell, said fuel cell having a catalyzed membrane electrolyte with an anode aspect and a cath-
3 ode aspect, and an anode chamber being defined between said anode aspect and an exterior
4 of said fuel cell, the method including the steps of:
5 separating said anodically-generated gasses from a fluid volume of fuel contained
6 within said anode chamber of said fuel cell, without recirculating said volume of fuel.

Please add the following new claim 62:

- 1 62. (New) A direct oxidation fuel cell system, comprising:
2 (A) a fuel source;

3 (B) a direct oxidation fuel cell having a catalyzed membrane electrolyte with an
4 anode aspect and a cathode aspect;

5 (C) a cell housing with an anode chamber defined between the anode aspect of the
6 catalyzed membrane and one exterior portion of said cell housing, with said chamber having
7 no exit port for liquid;

8 (D) an element disposed between said fuel source and said anode aspect of the di-
9 rect oxidation fuel cell for controlling the delivery of fuel to the direct oxidation fuel cell
10 system.

Please add the following new claim 63:

1 63. (New) The direct oxidation fuel cell system as defined in claim 62, wherein said ele-
2 ment controls the delivery of fuel without pumps or active recirculation mechanisms.

Please add the following new claim 64:

1 64. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 said fuel source is substantially entirely disposed within said fuel cell.

Please add the following new claim 65:

1 65. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 said fuel source is disposed external to the fuel cell.

Please add the following new claim 66:

1 66. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 a pressure differential exists between the fuel in the fuel source and the anode cham-
3 ber of the fuel cell.

Please add the following new claim 67:

1 67. (New) The direct oxidation fuel cell system as defined in claim 62 wherein said ele-
2 ment for controlling fuel delivery includes a pump.

Please add the following new claim 68:

- 1 68. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 said fuel source contains more than one liquid that may be mixed between the fuel
3 source and the anode of the fuel cell.

Please add the following new claim 69:

- 1 69. (New) The direct oxidation fuel cell system as defined in claim 68 wherein
2 said fuel source contains methanol and water.

A

Please add the following new claim 70:

- 1 70. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 said fuel source is capable of delivering up to 100% fuel to said fuel cell.

Please add the following new claim 71:

- 1 71. (New) The direct oxidation fuel cell system as defined in claim 70 wherein said fuel
2 is methanol.

Please add the following new claim 72:

- 1 72. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 delivery of said fuel is performed by suction.

Please add the following new claim 73:

- 1 73. (New) The direct oxidation fuel cell system as defined in claim 62 wherein
2 said delivery by suction is performed by the action of a capillary network in a porous
3 component, which is disposed between said fuel source and said anode of said direct oxida-
4 tion fuel cell.

Please add the following new claim 74:

- 1 74. (New) A method of delivering fuel to a direct oxidation fuel cell comprising the steps
2 of delivering fuel to the anode of the fuel cell in such a manner that the volume of fuel that
3 has been consumed at the anode of the fuel cell is replaced by the same volume of fresh fuel
4 or a fuel and water mixture delivered from a fuel source.

Please add the following new claim 75:

- 1 75. (New) A method of controlling delivery of fuel to a direct oxidation fuel cell system
2 wherein said fuel cell system includes a fuel source, a direct oxidation fuel cell having a
3 catalyzed membrane electrolyte with an anode aspect and a cathode aspect and an anode
4 chamber being defined between said anode aspect and an exterior portion of said direct oxi-
5 dation fuel cell, said anode chamber not having a port by which liquid can exit the anode
6 chamber, the method including the steps of:
7 providing a mass transport controlling element disposed between the anode aspect of
8 the catalyzed membrane and said fuel source whereby fuel delivery to the fuel cell system is
9 controlled without pumps or recirculation components.

Please add the following new claim 76:

- 1 76. (New) The method as defined in claim 75 including the further step of
2 disposing said fuel source entirely within said fuel cell.

Please add the following new claim 77:

- 1 77. (New) The method as defined in claim 75 including the further step of
2 disposing said fuel source external to the fuel cell.

Please add the following new claim 78:

- 1 78. (New) The method as defined in claim 75 including the further step of

2 placing fuel in said fuel source under a slight pressure to induce a pressure differential
3 between the fuel in said fuel source and the fuel in the anode chamber of the fuel cell.

Please add the following new claim 79:

1 79. (New) The method as defined in claim 75 including the further step of
2 providing in said fuel source more than one liquid; and
3 mixing said liquids between the fuel source and the anode chamber of the fuel cell.

Please add the following new claim 80:

1 80. (New) The method as defined in claim 79 wherein said liquids provided to said fuel
2 source include methanol and water.

Please add the following new claim 81:

1 81. (New) The method as defined in claim 75 including providing as said fuel, a sub-
2 stance of up to 100% methanol.

Please add the following new claim 82:

1 82. (New) The method as defined in claim 81 wherein said fuel substance is methanol.

Please add the following new claim 83:

1 83. (New) The method as defined in claim 75 including the further step of delivering said
2 fuel to said anode chamber by suction.

Please add the following new claim 84:

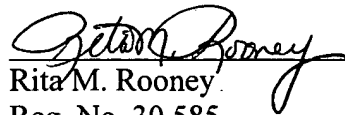

1 84. (New) The method as defined in claim 75 including the further step of delivering fuel
2 from said fuel source to said anode by the suction action of a capillary network in a porous

- 3 component that is disposed between said fuel source and said anode chamber of said direct
4 oxidation fuel cell.
